Camomile	600 mg

STABILIZER OF WATER-ELECTROLYTE BALANCE WITH ANTIDIARRHEAL EFFECT

Dietary compound feed for calves.

Recommended use: In the case of the first symptoms of diarrhea.

Composition: sodium chloride, potassium chloride, sodium bicarbonate, probiotic, herbal extract (camomile).

Application: If you notice the first symptoms of diarrhea, apply 1 bolus with the use of applicator into the mouth.

Repeat the application after several hours. Continue to apply it for 1-3 days, depending on the need.

Note: You need to ensure drinking water for the calf. Remember to consult a veterinarian before the use.

Packaging: 10 boluses with a weight of 13,5 g ($\pm 0,5$ g)

Storage: At room temperature, store in the original packaging.

Shelf life: 20 months from the date of manufacture.

- ➔ SUPPLEMENTS ELECTROLYTE DEFICIENCY
- ➔ PROVIDES RELAXANT AND LOCAL ANTISEPTIC EFFECT
- ➔ PROVIDES BENEFICIAL PROBIOTIC INTESTINAL BACTERIA THAT LIMIT THE DEVELOPMENT OF PATHOGENS
- ➔ EVENS OUT ACIDIC-ALKALINE BALANCE
- ➔ QUICKLY RESTORES NORMAL APPETITE

✓ **HIGH
EFFECTIVENESS**

✓ **SIMPLICITY AND RELIABILITY
OF APPLICATION**

**Sodium
Potassium
Chlorides**

Maintain water-electrolyte balance. Na^+ ions ensure the correct osmotic pressure of body fluids and they are essential in the process of water absorption in the intestines.

Bicarbonates

Thanks to the buffering properties, they perfectly even out metabolic acidosis, restoring the correct acidic-alkaline balance.

Probiotic

strains: *Lactobacillus acidophilus*,
Enterococcus faecium,
Pediococcus acidolactici,
Lactobacillus casei

By settling in the digestive tract, they inhibit the growth of pathogenic bacteria – the balance of intestinal flora. They strengthen and stimulate the immune system, as well as ensure homeostasis of the digestive tract.

Camomile

It has anti-inflammatory, antibacterial and local antiseptic effect. It regulates digestive disorders – stimulates bile secretion and prevents excessive fermentation in the intestines, increases appetite.

*In the case of noticing first signs of diarrhea, you can apply Electrolytic Bolus to all calves in the pen.
Oral administration of Bolus guarantees the provision of all necessary ingredients (without standing over a bucket).*
